

PUBLIC FOLDER CONNECTOR

MULTIPLE ENDPOINTS

Migrating away from public folders can be confusing and difficult. Using PowerShell scripts and PST files can be extremely frustrating. With the Public Folder Connector, simply set your public folder destination, configure access, and click migrate, it is that simple! Migrate your public folder data as you see fit, simply and easily.

"Options available for moving were standard across many packages, but "migrating" public folders to a Shared Mailbox/Resource was unique! I liked that the assistance by phone with someone knowledgeable about your scenario, which also formed part of the sales process."
